The methodology of the research to be conducted is as follows: first, a preliminary survey will be conducted to gather data on the current state of the problem and the factors that contribute to it. This will be followed by in-depth interviews with key stakeholders, including government officials, community leaders, and affected individuals. The data collected will be analyzed using quantitative and qualitative methods to identify patterns and trends. The results will then be used to develop recommendations for policy and practice improvements. In addition, a pilot project will be implemented to test the feasibility and effectiveness of the recommended interventions. The project will be monitored and evaluated regularly to ensure that it is meeting its goals and making progress towards solving the problem.
